YEAR 4

In Year 4, this past term, we have been studying volcanoes as part of our second Project-Based Learning unit. Initially, we started exploring how volcanoes are formed, which are the different parts of a volcano, the stages of a volcano and the different types.

DID YOU KNOW THAT COTOPAXI IS A STRATOVOLCANO BUT ACTUALLY NOT THE MOST DANGEROUS IN ECUADOR? HAVE YOU HEARD OF CHALUPAS? WELL, THAT'S THE ONE TO KEEP AN EYE ON!

One of the most exciting parts of this unit was that students were given the freedom to research a parameter of volcanoes they are interested in and work on a final product! Students came up with volcano dioramas, interviews, evacuation shelters, posters, leaflets and vlogs.

Ms. Vasilokonstantaki

THE HIGHLIGHT OF THIS UNIT WAS THAT WE VISITED THE COTOPAXI NATIONAL PARK! THAT WAS OUR FIRST TRIP FOR THIS ACADEMIC YEAR AND WAS INDEED WONDERFUL! HAVE A LOOK AT THE FOLLOWING PICTURES...

Lake Pimpiapungo - Year 4

Observing birds...

Hiking around Limpiapungo lake...

Mr. Toulkeridis, a famous geologist and researcher accompanied us to this trip. We looked at different types of rocks and soil.
